Part No. 267909

Foreword

This symbol identifies important safety messages. When you see it, read the message that follows and be alert to the possibility of personal injury.

Remember, safety instructions stated in this manual are for your protection. Read them carefully and follow them closely when working around or using this machine.

Read and study this manual completely before attempting to operate this implement. Take this manual to the field for handy reference when operating, adjusting, or servicing your machine.

When referenced, “Right-Hand” (RH) and “Left-Hand” (LH) side of the machine are determined by standing behind the machine and facing in the direction of travel.

Product Information

When ordering parts or when requesting further information or assistance, always give the following information:

- Machine name
- Model number
- Serial number of tracked undercarriage

All products manufactured by Unverferth Mfg. Co., Inc. are warranted to be free from material and workmanship defects for one full year from time of consumer delivery. Your local dealer will gladly assist you with any warranty questions.

Please fill out and retain this portion for your records. The serial number plate is located on the frame as shown below.

Purchase Date _____ Model _____ Serial No. _____

Dealer _____ City _____

Dealer Contact _____ Phone _____

IMPORTANT

- The information, specifications, and illustrations in the manual are based on information available at the time it was written. Due to continuing improvements in the design and manufacture of Unverferth products, all specifications and information contained herein are subject to change without notice.

General Hazard Information

No accident-prevention program can be successful without the wholehearted cooperation of the person who is directly responsible for the operation of the equipment.

A large number of accidents can be prevented only by the operator anticipating the result before the accident is caused and doing something about it. No power-driven equipment, whether it be transportation or processing, whether it is on the highway, in the field, or in the industrial plant, can be safer than the person who is at the controls. If accidents are to be prevented--and they can be prevented--it will be done by the operators who accept the full measure of their responsibility.

It is true that the designer, the manufacturer, and the safety engineer can help; and they will help, but their combined efforts can be wiped out by a single careless act of the operator.

It is said that, "the best kind of a safety device is a careful operator." We, at Unverferth Mfg. Co., Inc. ask that you be that kind of operator.

REMEMBER:
THINK SAFETY
 A CAREFUL OPERATOR IS THE
 BEST INSURANCE AGAINST AN
 ACCIDENT!

SIGNAL WORDS

INDICATES AN EXTREMELY HAZARDOUS SITUATION OR ACTION THAT WILL RESULT IN SERIOUS INJURY OR DEATH.

INDICATES A HAZARDOUS SITUATION OR ACTION THAT COULD RESULT IN SERIOUS INJURY OR DEATH.

INDICATES AN UNSAFE SITUATION OR ACTION THAT MAY RESULT IN PERSONAL INJURY.

Is used for instruction on operating, adjusting, or servicing a machine.

Following Safety Instructions

- Read and understand this operator's manual before operating. 
- All machinery should be operated only by trained and authorized personnel.
- To prevent machine damage, use only attachments and service parts approved by the manufacturer.
- Always shut tractor engine off and remove key before servicing. 
- Avoid personal attire such as loose fitting clothing, shoestrings, drawstrings, pants cuffs, long hair, etc., that may become entangled in moving parts.
- Do not allow anyone to ride on the implement. Make sure everyone is clear before operating machine or towing vehicle. 

Before Servicing

- Avoid working under an implement; however, if it becomes absolutely unavoidable, make sure the implement is safely blocked. 
- Ensure that all applicable safety decals are installed and legible.

Before Operating

- Always make certain everyone and everything is clear of the machine before beginning operation.
- Verify that all safety shields are in place and properly secured.   
- Ensure that all applicable safety decals are installed and legible.

During Operation

- Regulate speed to field conditions. Maintain complete control at all times.
- Never service or lubricate equipment when in operation.
- Use extreme care when operating close to ditches, fences, or on hillsides.
- Do not leave towing vehicle unattended with engine running.

Before Transporting

- This implement may not be equipped with brakes. Ensure that the towing vehicle has adequate weight and braking capacity to tow this unit.

During Transporting

- Regulate speed to road conditions and maintain complete control.
- Maximum transport speed of this implement should never exceed 20 mph as indicated on the machine. Maximum transport speed of any combination of implements must not exceed the lowest specified speed of the implements in combination. Do not exceed 8 mph during off-highway travel.
- Slow down before making sharp turns to avoid tipping. Drive slowly over rough ground and side slopes.
- It is probable that this implement is taller, wider and longer than the towing vehicle. Become aware of and avoid all obstacles and hazards in the travel path of the equipment, such as power lines, ditches, etc.

Pressurized Oil

- Relieve the hydraulic system of all pressure before adjusting or servicing. See hydraulic power unit manual for procedure to relieve pressure.
- High-pressure fluids can penetrate the skin and cause serious injury or death. Seek medical treatment immediately if injured by high-pressure fluids. Use cardboard or wood to detect leaks in the hydraulic system.
- Accumulators maintain pressure in hydraulic system. Do not service hydraulic system without first discharging hydraulic pressure in accumulator. Verify accumulator pressure gage reads zero after relieving pressure.
- Hydraulic system must be purged of air before operating to prevent serious injury or death. See cart operator's manual for procedure to purge air from hydraulic system.
- Do not bend or strike high-pressure lines. Do not install bent or damaged tubes or hoses.
- Repair all oil leaks. Leaks can cause fires, personal injury, and environmental damage.
- Route hoses and lines carefully to prevent premature failure due to kinking and rubbing against other parts. Make sure that all clamps, guards and shields are installed correctly.
- Check hydraulic hoses and tubes carefully. Replace components as necessary if any of the following conditions are found:
 - End fittings damaged, displaced, or leaking.
 - Outer covering chafed/cut or wire reinforcing exposed.
 - Outer covering ballooning locally.
 - Evidence of kinking or crushing of the flexible part of a hose.

Preparing for Emergencies

- Keep a first aid kit and properly rated fire extinguisher nearby.

- Keep emergency numbers for fire, rescue, and poison control personnel near the phone.

Wearing Protective Equipment

- Wear clothing and personal protective equipment appropriate for the job.

- Wear steel-toed shoes when operating.

- Wear hearing protection when exposed to loud noises.

- Do not wear additional hearing impairing devices such as radio headphones, etc.

Section II

Set Up

Conditioning Tracks Prior to Initial Usage..... 2-2

Tracks Auto-Greaser Set Up..... 2-2

Conditioning Tracks Prior to Initial Use

New tracks require conditioning. New rubber tracks, fresh from the mold, are tacky. This is a standard consequence of the vulcanization (curing) process. This will cause additional heat build up, premature wear, and occasionally galling of the inner surface. New tracks **MUST** be conditioned, as follows:

1. Spread a thin layer of talc, dirt, floor dry, or other non-caustic dust over the inside of the new track.
2. Drive the empty unit for a brief period to spread dust all over the inside of the track.
3. Inspect the inner surface of the track, if any tacky spots remain, repeat steps 1 and 2.
4. Verify track alignment. Refer to MAINTENANCE section.

Conditioning the track is necessary only once, when the track is first installed on its undercarriage.

Tracks Auto-Greaser Set Up

For tracks Auto-Greaser set up and to fill grease lines, refer to tracks Auto-Greaser manual (282986).

Notes

Section III

Operation

Track Operation..... 3-2

Tensioning 3-3

De-tensioning 3-5

Track Operation

WARNING

- HIGH-PRESSURE FLUIDS CAN PENETRATE THE SKIN AND CAUSE SERIOUS INJURY OR DEATH. SEEK MEDICAL TREATMENT IMMEDIATELY IF INJURED BY HIGH-PRESSURE FLUIDS. USE CARDBOARD OR WOOD TO DETECT LEAKS IN THE HYDRAULIC SYSTEM.
- ACCUMULATORS USED IN THIS HYDRAULIC SYSTEM CAN RETAIN FLUID UNDER PRESSURE EVEN AFTER TRACTOR HYDRAULIC VALVE IS PLACED IN FLOAT. SEE TRACTOR OPERATOR'S MANUAL FOR PROPER PRESSURE RELIEF PROCEDURE. APPLY PRESSURE RELIEF PROCEDURE FOR AT LEAST 20 SECONDS AFTER CYLINDER(S) HAVE STOPPED MOVING.
- DO NOT PUNCTURE OR DENT SHELL AND DO NOT WELD NEAR ACCUMULATOR.

NOTE: Check track hydraulic pressure daily and maintain recommended pressure shown in chart below.

For the 50" tracks, the accumulator is pre-charged to 1,120 PSI, and the hydraulic system is pre-charged with nitrogen to 1,250 PSI.

For the 42" tracks, the accumulator is pre-charged to 850 PSI, and the hydraulic system is pre-charged with nitrogen to 1,000 PSI.

Do not break fittings in accumulator. The accumulator itself is under pressure at all times. Once connected into the hydraulic system, the accumulator will maintain pressure in the system until pressure is relieved by the tractor's hydraulic system.

The cart is not equipped with brakes. Ensure that the towing vehicle has adequate weight and braking capacity to tow this implement. Never tow a loaded grain cart over public roads.

Track Tension	
50" Track	1,250 PSI
42" Track	1,000 PSI

Do not exceed 8 mph during off-highway use. Take special care and consideration while loaded. Regulate speed to road conditions. Maximum speed should never exceed 20 mph.

Reduce speed prior to turning to avoid risk of tipping over.

Do not grease or oil the equipment while in operation.

IMPORTANT

- To maximize the life of the tracks, wide turns should be made whenever possible.
- To avoid belt damage, do not exceed 8 m.p.h. when loaded.
- Freezing mud/snow can cause damage to track components. Clear mud and snow out of the inside of track belt, between wheels and guide lug area before mud can potentially freeze.

Tensioning

⚠ WARNING

- **HIGH-PRESSURE FLUIDS CAN PENETRATE THE SKIN AND CAUSE SERIOUS INJURY OR DEATH. SEEK MEDICAL TREATMENT IMMEDIATELY IF INJURED BY HIGH-PRESSURE FLUIDS. USE CARDBOARD OR WOOD TO DETECT LEAKS IN THE HYDRAULIC SYSTEM.**
- **ACCUMULATORS USED IN THIS HYDRAULIC SYSTEM CAN RETAIN FLUID UNDER PRESSURE EVEN AFTER TRACTOR HYDRAULIC VALVE IS PLACED IN FLOAT. SEE TRACTOR OPERATOR'S MANUAL FOR PROPER PRESSURE RELIEF PROCEDURE. APPLY PRESSURE RELIEF PROCEDURE FOR AT LEAST 20 SECONDS AFTER CYLINDER(S) HAVE STOPPED MOVING.**
- **DO NOT PUNCTURE OR DENT SHELL AND DO NOT WELD NEAR ACCUMULATOR.**

The accumulator in the hydraulic system is precharged with nitrogen to a very high pressure. Do not break fittings in accumulator. The accumulator itself is under pressure at all times. Once connected into the hydraulic system, the accumulator will maintain pressure in the system until pressure is relieved by the tractor's hydraulic system.

Your track undercarriage came with a track tensioner hydraulic hose kit. If you need a replacement, please contact your dealer.

1. Park the empty cart on a firm, level surface. Set the tractor's parking brake, shut-off the engine, and remove the ignition key. Do not block tracks on cart.
2. Make sure the valve on the tensioner kit is in the closed position. The valve is closed when the handle is 90 degrees to the coupler, parallel to the side of the track frame.
3. Attach pressure and return couplers to the tractor and the female coupler to the track. See Fig. 3-3.
4. For tensioning, proceed to step 5. For De-tensioning, see "De-tensioning" later in this section.

Fig. 3-2

Fig. 3-3

Tensioning

5. Set tractor SCV to 5 gpm maximum.

NOTE: Exceeding 5 gpm will result in inaccurate track tensioning and poorly performing track accumulator.

6. Start tractor and use SCV to pressurize line as shown in Fig. 3-3. The valve in the tensioner hose will regulate the pressure for the track.

7. Open the 90 degree shut-off valve on the track frame. Read pressure gauge on track frame. See Fig. 3-4.

NOTE: Valve is open when handle is parallel to hydraulic fitting. Valve is closed when handle is parallel to track frame. (Fig. 3-4)

8. Adjust track pressure by turning relief valve on tensioner hose kit. First, loosen the 9/16" jam nut. Then, use a 5/32" hex driver to adjust the set screw. Adjust slowly while watching the pressure gauge. (Fig. 3-5)

NOTE: If system does not hold pressure, it is possible there is air in the system. Follow steps 5-8 but leave the track valve open and cycle the hydraulics on the tractor from extend to float. Engage the hydraulics long enough to completely tension the track then switch it to float and allow the track to De-tension. Repeat these steps 3 to 4 times then re-tension and close the track valve.

NOTE: 50" tracks require 1250 PSI and 42" tracks require 1000 PSI.

NOTE: Turn 5/32" set screw clockwise to increase pressure. Counter-clockwise to decrease pressure. (Fig. 3-5)

9. Once proper track pressure is achieved, lock the set screw by tightening the 9/16" jam nut and then close 90 degree shut-off valve. (Fig. 3-5)

10. Relieve pressure on tractor SCV. See tractor operator's manual for procedure.

11. Remove track tensioner hose from track frame and replace cover.

12. Store track tensioner hose kit in a dry, clean place.

De-tensioning

1. Install the tensioner hose to the track valve and to the tractor BEFORE opening the track valve.
2. Open valve on track frame and set tractor SCV for pressure-free drain. See tractor operator's manual for pressure relief procedure.

NOTE: Valve is open when handle is parallel to hydraulic fitting. Valve is closed when handle is parallel to track frame. (Fig. 3-4)

3. Allow track to De-tension for 5 minutes.
4. Close valve on track, and make sure there is no pressure in the hydraulic line.
5. Turn off tractor and remove hose.

Lubrication

DESCRIPTION	POINTS	LUBRICANT	QTY	HOURS
Track Idler Wheels and Bogie Hubs	8 (Two-Bogie)	EP-2	2 Shots	Weekly* (50 - 75 Hours)
	12 (Four-Bogie)		Repack	2 Years

* If operating in wet or muddy conditions grease Daily (10 - 15 Hours).

DESCRIPTION	POINTS	LUBRICANT	QTY	HOURS
Bogie Pivot, Trunnion Pin, Tensioner Pin, Track Pivot Pin	Connects to the Auto-Greaser			

Alignment

WARNING

- **ENTANGLEMENT WITH MOVING PARTS CAN CAUSE SERIOUS INJURY OR DEATH. USE EXTREME CARE WHEN INSPECTING AND ADJUSTING BELT TRACKING. AVOID PERSONAL ATTIRE SUCH AS LOOSE FITTING CLOTHING, SHOESTRINGS, DRAW-STRINGS, PANTS CUFF, LONG HAIR, ETC., THAT MAY BECOME ENTANGLED IN MOVING PARTS.**
- **EYE PROTECTION AND OTHER APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT MUST BE WORN WHILE SERVICING IMPLEMENT.**
- **KEEP HANDS CLEAR OF PINCH POINT AREAS.**
- **TIPPING OR MOVEMENT OF THE MACHINE CAN CAUSE SERIOUS INJURY OR DEATH. BE SURE MACHINE IS SECURELY BLOCKED.**

The maintenance criteria listed below are very important for proper track operation. Follow these recommendations before and during the adjustment process as necessary.

Check these items every day to prevent undue wear to wheels and track.

All tracks have been factory adjusted. But as the tracks wear and cure, they may need to be realigned. If wear is noticed on the guide lugs, follow the instructions for realignment.

NOTE: Tracks can be adjusted while tensioned.

1. Verify track tension is set properly. Refer to OPERATION section.
2. Drive cart for 1 mile minimum. Pull the cart in a straight line. Stop on hard, level, uniform surface.
3. Stop tractor. Place in PARK. Block the tracks on the cart to keep it from moving. Set the tractor's parking brake, shut-off the engine, and remove the ignition key.
4. Check the alignment as follows: Space between guide lugs and inside of front/rear track idler wheels should be equal and guide lugs shoulders should be evenly worn. If spacing is equal and both sides of guide lug are evenly heated, tracks are in alignment. If spacing or heating is unequal, proceed to next step.
5. Remove the bolt retainer plate (282771B) and hardware. Retain these for reassembly. See Fig. 4-3.
6. Adjust the alignment bolt (267791 - 50" Tracks; 9006454 - 42" Tracks) in 1/2 turn increments. See Fig. 4-3.

NOTE: For current alignment, rotating the alignment bolt clockwise moves the track belt in towards cart. Turning alignment bolt counter clockwise moves the track belt out away from cart. Move the track away from the warmer side and towards the side with more gap.

Fig. 4-3

ALIGNMENT BOLT

(continued on next page)

Alignment (continued)

NOTE: For previous alignment with adjustment bolts on both inside and outside track frame, the alignment procedure is opposite. Turning outside bolt clockwise moves belt out away from cart, and turning inside bolt clockwise moves belt in toward cart.

7. Replace bolt retainer plate and hardware removed in step 5.
8. Repeat process beginning at step 1.

IMPORTANT

- For new rubber belts, follow conditioning instructions in “Conditioning Tracks Prior to Initial Use” in SET UP section.

Rotate Tracks if Required

In some applications, wear on the tracks can be uneven (due to extensive side hill operation, excessive camber, non-uniform load distribution, etc.). In applications where the undercarriage adjustments necessary to correct these uneven wear patterns do not exist, “rotation” of the tracks (from side to side) may maximize their service life. This is particularly true in situations where the track exhibits accelerated wear on either the extreme inboard or extreme outboard edges.

Track Tension Cylinder Replacement

WARNING

- EYE PROTECTION AND OTHER APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT MUST BE WORN WHILE SERVICING IMPLEMENT.
- KEEP HANDS CLEAR OF PINCH POINT AREAS.
- HIGH-PRESSURE FLUIDS CAN PENETRATE THE SKIN AND CAUSE SERIOUS INJURY OR DEATH. SEEK MEDICAL TREATMENT IMMEDIATELY IF INJURED BY HIGH-PRESSURE FLUIDS. USE CARDBOARD OR WOOD TO DETECT LEAKS IN THE HYDRAULIC SYSTEM.
- ACCUMULATORS USED IN THIS HYDRAULIC SYSTEM CAN RETAIN FLUID UNDER PRESSURE EVEN AFTER TRACTOR HYDRAULIC VALVE IS PLACED IN FLOAT. SEE TRACTOR OPERATOR'S MANUAL FOR PROPER PRESSURE RELIEF PROCEDURE. APPLY PRESSURE RELIEF PROCEDURE FOR AT LEAST 20 SECONDS AFTER CYLINDER(S) HAVE STOPPED MOVING.
- DO NOT PUNCTURE OR DENT SHELL AND DO NOT WELD NEAR ACCUMULATOR.
- FALLING OBJECTS CAN CAUSE SERIOUS INJURY OR DEATH. DO NOT WORK UNDER THE MACHINE AT ANY TIME WHILE BEING HOISTED. BE SURE ALL LIFTING DEVICES AND SUPPORTS ARE RATED FOR THE LOADS BEING HOISTED. THESE ASSEMBLY INSTRUCTIONS WILL REQUIRE SAFE LIFTING DEVICES UP TO 25,000 LBS. FOR 2000 & 2500 BUSHEL CARTS. SPECIFIC LOAD RATINGS FOR INDIVIDUAL LOADS WILL BE GIVEN AT THE APPROPRIATE TIME IN THE INSTRUCTIONS.

The accumulator in the hydraulic system is pre-charged with nitrogen to a very high pressure. Do not break fittings in accumulator. The accumulator itself is under pressure at all times. Once connected into the hydraulic system, the accumulator will maintain pressure in the system until pressure is relieved by the tractor's hydraulic system.

1. Park the empty cart on a firm, level surface. Set the tractor's parking brake, shut off the engine, remove the ignition key and disconnect the PTO shaft and hydraulics from the tractor and cart.
2. Use a safe lifting device and support stands rated for cart weight plus 9,000 lbs. for the track assembly. See base cart operator manual for proper lifting procedures and add weight of track assembly to lifting device requirements.
3. Raise one side of the cart. Support with adequate blocking.
4. De-tension track using procedure in OPERATION section of this manual.

Track Tension Cylinder Replacement (continued)

5. Remove debris deflector plates, brackets and hardware. Retain parts and hardware for reassembly. (Fig. 4-4)

Fig. 4-4

Track Tension Cylinder Replacement (continued)

CAUTION

- IMPROPERLY TORQUED WHEEL NUTS/BOLTS CAN CAUSE A LOSS OF IMPLEMENT CONTROL AND MACHINE DAMAGE. WHEEL NUTS/BOLTS MUST BE CHECKED REGULARLY. SEE WHEEL TORQUE DIAGRAM PAGE IN THE MAINTENANCE SECTION FOR PROPER WHEEL NUT/BOLT SPECIFICATIONS. WARRANTY DOES NOT COVER FAILURES CAUSED BY IMPROPERLY TORQUED WHEEL NUTS/BOLTS.

- Using a safe lifting device rated for 600 lbs., remove front outside idler wheel by removing nuts securing the wheel to the hub and pull the idler wheel away from the cart. (Fig. 4-5)
- Remove rod end cylinder pin from the track tensioner by removing securing hardware. (Fig. 4-5)

Fig. 4-5

- Remove hose and fitting from the top side of the cylinder, and plug with a 3/4"-16 O-ring port plug to prevent excess oil leakage.
- Remove 90 degree hydraulic fitting from old cylinder and install on new cylinder paying special attention to alignment of 90 degree fitting.
- Remove base end cylinder pin and replace cylinder using hardware previously removed.
- Align, assemble and tighten hose fittings. Check hose routing clearance.

NOTE: Route hoses away from areas that may cause abrasion or kinking of hoses during operation.

- Using a safe lifting device rated for 600 lbs., align idler wheel with the hub and attach using nuts previously removed.
- Torque wheel nuts per torque diagram in the MAINTENANCE section.
- Tension track according to procedure in OPERATION section.
- Secure the deflector plates and brackets with hardware previously removed. See torque chart in MAINTENANCE section for proper tightening of hardware.
- Lower cart to the ground and remove safe lifting device.
- Reverify track alignment as per procedure in MAINTENANCE section.

Hub Seal Installation

When installing the seal, make sure the spring on the seal lip is facing the outside of the hub, closest to the seal guard. The seal guard will cover the seal using capscrews.

(Fig. 4-6 and 4-7)

NOTE: The spring side of the seal must face the outside of the hub to allow the grease to purge. (Fig. 4-6 and 4-7)

Trunnion Replacement

WARNING

- TIPPING OR MOVEMENT OF THE MACHINE CAN CAUSE SERIOUS INJURY OR DEATH. BE SURE MACHINE IS SECURELY BLOCKED.
- EYE PROTECTION AND OTHER APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT MUST BE WORN WHILE SERVICING IMPLEMENT.
- KEEP HANDS CLEAR OF PINCH POINT AREAS.
- HIGH-PRESSURE FLUIDS CAN PENETRATE THE SKIN AND CAUSE SERIOUS INJURY OR DEATH. SEEK MEDICAL TREATMENT IMMEDIATELY IF INJURED BY HIGH-PRESSURE FLUIDS. USE CARDBOARD OR WOOD TO DETECT LEAKS IN THE HYDRAULIC SYSTEM.
- ACCUMULATORS USED IN THIS HYDRAULIC SYSTEM CAN RETAIN FLUID UNDER PRESSURE EVEN AFTER TRACTOR HYDRAULIC VALVE IS PLACED IN FLOAT. SEE TRACTOR OPERATOR'S MANUAL FOR PROPER PRESSURE RELIEF PROCEDURE. APPLY PRESSURE RELIEF PROCEDURE FOR AT LEAST 20 SECONDS AFTER CYLINDER(S) HAVE STOPPED MOVING.
- DO NOT PUNCTURE OR DENT SHELL AND DO NOT WELD NEAR ACCUMULATOR.
- FALLING OBJECTS CAN CAUSE SERIOUS INJURY OR DEATH. DO NOT WORK UNDER THE MACHINE AT ANY TIME WHILE BEING HOISTED. BE SURE ALL LIFTING DEVICES AND SUPPORTS ARE RATED FOR THE LOADS BEING HOISTED. THESE ASSEMBLY INSTRUCTIONS WILL REQUIRE SAFE LIFTING DEVICES UP TO 38,000 LBS. FOR 2000 & 2500 BUSHEL CARTS. SPECIFIC LOAD RATINGS FOR INDIVIDUAL LOADS WILL BE GIVEN AT THE APPROPRIATE TIME IN THE INSTRUCTIONS.

The accumulator in the hydraulic system is pre-charged with nitrogen to a very high pressure. Do not break fittings in accumulator. The accumulator itself is under pressure at all times. Once connected into the hydraulic system, the accumulator will maintain pressure in the system until pressure is relieved by the tractor's hydraulic system.

NOTE: It is recommended to use guide cone kit 267939 or 267941 when installing track assembly onto pivot pin

1. Park the empty cart on a firm, level surface. Set the tractor's parking brake, shut off the engine, remove the ignition key and disconnect the PTO shaft and hydraulics from the tractor and cart.
2. Use a safe lifting device and support stands rated for cart weight plus 9,000 lbs. for the track assembly. See base cart operator manual for proper lifting procedures and add weight of track assembly to lifting device requirements.
3. Raise one side of the cart. Place equally rated lifting devices under the axle nearest to the track that will be removed.

Trunnion Replacement (continued)

4. Remove debris deflector plates, brackets and hardware. Retain parts and hardware for reassembly. (Fig. 4-8).

Fig. 4-8

5. De-tension track using procedure in OPERATION section of this manual.
6. Disconnect Auto Greaser hoses from track assembly, marking each line so it can be reassembled in the correct position.

NOTE: It is critical the hose to the main pivot pin be placed in the correct location as this gets a different amount of grease than the others.

7. Using safe lifting devices rated at 38,000 lbs., raise the track off the ground.

Fig. 4-9

8. Using a safe lifting device rated at 600 lbs., remove front and rear outside idler wheels. Retain parts and hardware for reassembly. (Fig. 4-9)

Trunnion Replacement (continued)

9. Using a safe lifting device rated at 3,000 lbs., remove the track belt and pull the track belt away from the track assembly. (Fig. 4-10)

Fig. 4-10

10. Remove the pivot shaft plate cover and retaining hardware as shown in Fig. 4-11. Keep parts for reassembly.
11. Using a safe lifting device rated at 6,000 lbs., pull the track away from the cart. (Fig. 4-11)

Fig. 4-11

12. Remove the six 1"-8UNC x 10 1/2" cap screws, twelve 1" flat washers (9405-118), and six 1"-8UNC locknuts (92199) holding the trunnion housing to the track frame. Keep hardware for reassembly. (Fig. 4-12)

Fig. 4-12

Trunnion Replacement (continued)

13. Using a safe lifting device rated for 500 lbs., remove the trunnion assembly (Fig. 4-13).

Fig. 4-13

14. Place the new trunnion assembly into track frame with the grease fittings facing up as shown in Fig. 4-14.

Fig. 4-14

15. Secure with the six 1"-8UNC x 10 1/2" capscrews, twelve 1" USS flat washers (9405-118), and six 1"-8UNC locknuts (92199) from step 11. (Fig. 4-15)

16. Torque hardware to 640 ft.-lbs.

Fig. 4-15

Capscrew (Grade 8)
1"-8UNC x 10 1/2"

Trunnion Replacement (continued)

17. Grease the pivot shaft and inside of bushing and seals prior to assembly. Be careful not to damage the seal when assembling the track on the shaft. Using a safe lifting device rated at 6,000 lbs. align the track frame with the cart pivot shaft.
18. Attach the pivot shaft plate cover and retaining hardware as shown in Fig. 4-16. See torque chart in MAINTENANCE section for proper tightening of all hardware.

19. Using safe lifting devices rated at 38,000 lbs., raise the track off the ground.
20. Using a safe lifting device rated at 3,000 lbs., install the track belt (Fig. 4-17).

Trunnion Replacement (continued)**CAUTION**

- IMPROPERLY TORQUED WHEEL NUTS/BOLTS CAN CAUSE A LOSS OF IMPLEMENT CONTROL AND MACHINE DAMAGE. WHEEL NUTS/BOLTS MUST BE CHECKED REGULARLY. SEE WHEEL TORQUE DIAGRAM PAGE IN THE MAINTENANCE SECTION FOR PROPER WHEEL NUT/BOLT SPECIFICATIONS. WARRANTY DOES NOT COVER FAILURES CAUSED BY IMPROPERLY TORQUED WHEEL NUTS/BOLTS.

21. Using a safe lifting device rated at 600 lbs., reinstall the idler wheels and, for 50" tracks only, the wheel reinforcing rings (Fig. 4-18). Torque wheel nuts and tensioner track per torque diagram in the MAINTENANCE section.

Trunnion Replacement (continued)

22. Connect Auto Greaser hoses to track assembly paying special attention to the locations identified and labeled during removal.

NOTE: It is critical the hose to the main pivot pin be placed in the correct location as this gets a different amount of grease than the others.

23. Tension track using procedure in OPERATION section of this manual.
24. Secure the deflector plates and brackets (Fig. 4-19). See torque chart in MAINTENANCE section for proper tightening of all hardware.
25. Lower cart to the ground and remove safe lifting device.
26. Align track as per procedure in MAINTENANCE section.

Fig. 4-19

Tensioner & Alignment Assembly Replacement

WARNING

- TIPPING OR MOVEMENT OF THE MACHINE CAN CAUSE SERIOUS INJURY OR DEATH. BE SURE MACHINE IS SECURELY BLOCKED.
- EYE PROTECTION AND OTHER APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT MUST BE WORN WHILE SERVICING IMPLEMENT.
- KEEP HANDS CLEAR OF PINCH POINT AREAS.
- HIGH-PRESSURE FLUIDS CAN PENETRATE THE SKIN AND CAUSE SERIOUS INJURY OR DEATH. SEEK MEDICAL TREATMENT IMMEDIATELY IF INJURED BY HIGH-PRESSURE FLUIDS. USE CARDBOARD OR WOOD TO DETECT LEAKS IN THE HYDRAULIC SYSTEM.
- ACCUMULATORS USED IN THIS HYDRAULIC SYSTEM CAN RETAIN FLUID UNDER PRESSURE EVEN AFTER TRACTOR HYDRAULIC VALVE IS PLACED IN FLOAT. SEE TRACTOR OPERATOR'S MANUAL FOR PROPER PRESSURE RELIEF PROCEDURE. APPLY PRESSURE RELIEF PROCEDURE FOR AT LEAST 20 SECONDS AFTER CYLINDER(S) HAVE STOPPED MOVING.
- DO NOT PUNCTURE OR DENT SHELL AND DO NOT WELD NEAR ACCUMULATOR.
- FALLING OBJECTS CAN CAUSE SERIOUS INJURY OR DEATH. DO NOT WORK UNDER THE MACHINE AT ANY TIME WHILE BEING HOISTED. BE SURE ALL LIFTING DEVICES AND SUPPORTS ARE RATED FOR THE LOADS BEING HOISTED. THESE ASSEMBLY INSTRUCTIONS WILL REQUIRE SAFE LIFTING DEVICES UP TO 38,000 LBS. FOR 2000 & 2500 BUSHEL CARTS. SPECIFIC LOAD RATINGS FOR INDIVIDUAL LOADS WILL BE GIVEN AT THE APPROPRIATE TIME IN THE INSTRUCTIONS.

The accumulator in the hydraulic system is pre-charged with nitrogen to a very high pressure. Do not break fittings in accumulator. The accumulator itself is under pressure at all times. Once connected into the hydraulic system, the accumulator will maintain pressure in the system until pressure is relieved by the tractor's hydraulic system.

1. Park the empty cart on a firm, level surface. Set the tractor's parking brake, shut off the engine, remove the ignition key and disconnect the PTO shaft and hydraulics from the tractor and cart.
2. Use a safe lifting device and support stands rated for cart weight plus 9,000 lbs. for the track assembly. See base cart operator manual for proper lifting procedures and add weight of track assembly to lifting device requirements.
3. Raise one side of the cart. Place equally rated lifting devices under the axle nearest to the track that will be removed.

Tensioner & Alignment Assembly Replacement (continued)

4. Remove debris deflector plates, brackets and hardware. Retain parts and hardware for reassembly. (Fig. 4-20).

Fig. 4-20

5. De-tension track using procedure in OPERATION section of this manual.
6. Disconnect Auto Greaser hoses from track assembly, marking each line so it can be reassembled in the correct position.
7. Using safe lifting devices rated at 38,000 lbs., raise the track off the ground.

Tensioner & Alignment Assembly Replacement (continued)

8. Using a safe lifting device rated at 3,000 lbs., support the track near the idler wheels. (Fig. 4-21)
9. Using a safe lifting device rated at 600 lbs., remove front inside and outside idler wheels. Retain parts and hardware for reassembly. (Fig. 4-21)

Fig. 4-21

10. Remove the hydraulic cylinder rod end retaining hardware. Retain hardware for reassembly. (Fig. 4-22)
11. For 50" Equalizer, disconnect 90 degree adapter street elbow (9006817) from alignment pin weldment (267756). (Fig. 4-23)
12. For 42" Equalizer, disconnect 90 degree adapter street elbow (9006817) from front tensioner assembly (267921B). (NOT SHOWN)

Shown less track belt for illustration purposes only.

Fig. 4-22

Tensioner & Alignment Assembly Replacement (continued)

13. Note alignment rod weldment (267791) position. Remove alignment bolt retainer plate (282771B). Remove alignment rod weldment and retain all hardware for reassembly as shown in Fig. 4-23.
14. Remove alignment pin weldment (267756 for 50" and 268267 for 42"). Retain pin and all hardware for reassembly. (Fig. 4-23)
15. Using a safe lifting device rated at 500 lbs., remove front tensioner/alignment assembly (267742B for 50" and 267921B for 42"). (Fig. 4-23)

NOTE: Start with alignment rod weldment (267791) in similar position to disassembly in step 13.

Tensioner & Alignment Assembly Replacement (continued)

16. Using a safe lifting device rated at 500 lbs., install new tensioner assembly (267742B for 50" and 267921B for 42"). Fig. 4-24
17. Install new alignment rod weldment (267791) with previously used hardware shown in Fig. 4-24.
18. Install alignment pin weldment (267756 for 50" and 268267 for 42") with previously used hardware as shown in Fig. 4-24.
19. For 50" Equalizer, reconnect 90 degree adapter street elbow (9006817) to alignment pin weldment. (Fig. 4-24)
20. For 42" Equalizer, reconnect 90 degree adapter street elbow (9006817) to front tensioner assembly (267921B). (NOT SHOWN)

Tensioner & Alignment Assembly Replacement (continued)

21. Secure the hydraulic cylinder rod end with the hardware removed in step #10 (Fig. 4-25).

Shown less track belt for illustration purposes only.

Fig. 4-25

22. Using a safe lifting device rated at 600 lbs., reinstall the idler wheels and, for 50" tracks only, the wheel reinforcing rings (Fig. 4-26). Torque wheel nuts and tensioner track per torque diagram in the MAINTENANCE section.

CAUTION

- IMPROPERLY TORQUED WHEEL NUTS/BOLTS CAN CAUSE A LOSS OF IMPLEMENT CONTROL AND MACHINE DAMAGE. WHEEL NUTS/BOLTS MUST BE CHECKED REGULARLY. SEE WHEEL TORQUE CHART PAGE IN THIS MANUAL FOR PROPER WHEEL NUT/BOLT SPECIFICATIONS. WARRANTY DOES NOT COVER FAILURES CAUSED BY IMPROPERLY TORQUED WHEEL NUTS/BOLTS.

23. Remove safe lifting device rated at 3,000 lbs. supporting the track near idler wheels. (Fig. 4-26)

Fig. 4-26

Tensioner & Alignment Assembly Replacement (continued)

24. Connect Auto Greaser hoses to track assembly paying special attention to the locations identified and labeled during removal.
25. Tension track using procedure in OPERATION section of this manual.
26. Secure the deflector plates and brackets (Fig. 4-27). See torque chart for proper tightening of all hardware.
27. Lower cart to the ground and remove safe lifting device.
28. Align track as per procedure in MAINTENANCE section.

Fig. 4-27

Flange Screw (Grade 5) 5/8"-11UNC x 1"
& Large Flange hex Nuts 5/8"-11UNC

Storage

1. Avoid storing in sunlight.
2. Avoid excessive moisture.

Ideally, rubber tracks should be stored indoors, in a draft-free area. If tracks must be stored outdoors, a tarpaulin or other covering should be used to protect it from the weather.

Track Wheel Torque

CAUTION

- IMPROPERLY TORQUED WHEEL NUTS/BOLTS CAN CAUSE A LOSS OF IMPLEMENT CONTROL AND MACHINE DAMAGE. TORQUE WHEEL NUTS/BOLTS TO VALUES IN TABLE. CHECK TORQUE BEFORE USE, AFTER ONE HOUR OF UNLOADED USE OR AFTER FIRST LOAD, AND EACH LOAD UNTIL WHEEL NUTS/BOLTS MAINTAIN TORQUE VALUE. CHECK TORQUE EVERY 10 HOURS OF USE THERE-AFTER. AFTER EACH WHEEL REMOVAL START TORQUE PROCESS FROM BEGINNING. WARRANTY DOES NOT COVER FAILURES CAUSED BY IMPROPERLY TORQUED WHEEL NUTS/BOLTS.

Failure to check torque before first load may damage wheel nut/bolt seats. Once seats are damaged, it will become impossible to keep nuts/bolts tight. Tighten nuts/bolts to applicable torque value shown in table. Start all nuts/bolts by hand to prevent cross threading. Torque nuts/bolts in the recommended sequence as shown in Diagram 1.

WHEEL HARDWARE	
SIZE	FOOT-POUNDS
3/4-16 (UNF)	365 ft.-lbs.

DIAGRAM 1

Proper Tightening of Hub Bearings

1. Tighten the slotted hex nut while spinning the hub until drag can be felt in the hub.
2. Loosen the slotted hex nut until there is no pressure on the hub.
3. Tighten the slotted hex nut until resistance can be felt in the hub. Back off the nut to the nearest hole. If there is any side play in the hub, tighten to the next hole.

Complete Torque Chart

Capscrews - Grade 5

NOTE:

- Grade 5 capscrews can be identified by three radial dashes on the head.
- For track wheel torque requirements, refer to Track Wheels.
- Tighten U-bolts evenly and equally to have the same number of threads exposed on each end.

Hydraulic Fittings

Tightening O-Ring Fittings

1. Inspect components for damage or contamination. Do not connect any other type of fitting to an O-ring fitting.
2. For adjustable fittings, insure the jam nut and washer are fully backed up.
3. Lubricate the O-ring and threads on the fitting.
4. Turn the fitting into the port until it is finger tight.
5. For adjustable fittings, set in the desired position.
6. Using a wrench, torque the fitting to the value in the below table. For adjustable fittings the jam nut will be tightened.

Note: Never use a power tool to install a fitting.

Dash Size	Thread Size	Straight Stud Torque (Ft-Lbs)	Adjustable Stud Torque (Ft-Lbs)
-5	1/2-20	14-19	10-14
-6	9/16-18	18-24	12-16
-8	3/4-16	27-43	20-30
-10	7/8-14	36-48	30-36
-12	1-1/16-12	65-75	44-54
-14	1-3/16-12	75-99	53-70
-16	1-5/16-12	85-123	59-80
-20	1-5/8"-12	115-161	75-100
-24	1-7/8"-12	125-170	105-125

O-Ring fittings

Straight O-Ring fittings

Finger-tighten fitting then torque per the chart

Adjustable O-Ring Fittings

Finger-tighten fitting then torque jam nut per the chart

Hydraulic Fittings

Tightening O-Ring Fittings

1. Inspect all components for damage or contamination. Do not connect any other type of fitting to a JIC fitting.
2. Lubricate the threads.
3. Turn the fitting into the port until it bottoms out.
4. Use one wrench on the fixed hex on the hose to prevent twisting and a second on the swivel. Tighten the fitting another 60 degrees (or one flat).

Note: Never use a power tool to install a fitting.

JIC fittings

Bottom out fitting,
then tighten one flat
