

FREQUENTLY ASKED QUESTIONS

Q What size of hitch will I need for the Track TILLr?

A You will need a CAT 3/3N or a CAT 2 Quick hitch.

Q Do I have to have a mid-frame packer?

A No, the mid frame packer is now optional.

Q How fast should I run this machine?

A The Track TILLr should be ran around 5-6 mph.

Q How do I bring more soil into the tracks using the disk gangs?

A Use the hydraulics in the cab to extend out the disk gang cylinder making the angle more aggressive, this will then create more tillage action.

Q How wide should I set the side wall busters?

A These should be set based on the width of your track and your soil type, but generally wider is better.

Q How do I do a better job breaking down large dirt clods behind the machine?

A Apply more pressure to the rear conditioner baskets by either, tightening the tension nut on the spring down pressure units; or adjusting the hydraulics down on the hydraulic conditioner basket units.
