Killbros

200-SERIES GRAVITY BOX AUGER

Killbros gravity box augers provide a versatile and efficient addition to your farm and will quickly become one of the most useful tools in your operation.

STANDARD FEATURES

Killbros Gravity Box Augers consist of durable six-inch steel tubing for protection and longevity. They are available in 12-, 14- and 15-foot sizes and with cupped-steel, plastic or brush flighting. These efficient augers move between 10-14 bushels of seed or grain per minute or 900 lbs. of fertilizer per minute (based on 500 RPM auger speed).

The motor features standard cable-operated on-off valve with a top-mounted positioning that protects components and provides excellent ground clearance. Requires just 8-12 gallons per minute and 1,200 PSI.

- Adjustable hopper fits virtually any door width. The sump placement below the hopper provides continuous flow rate, minimizing seed damage.

- Transport bracket with locking pin holds auger tightly to side of wagon during transport. Locking winch easily raises and lowers unit from transport position to desired working height.

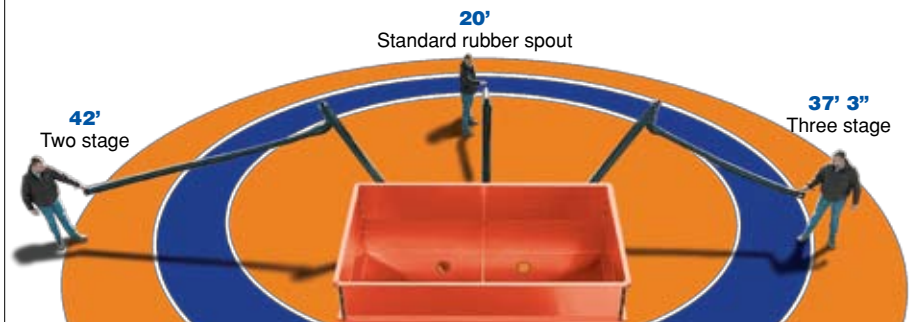

- Complete cleanout is easy with the convenient sump-access panel.

200-Series SUMP STYLE	212	214	215
Flighting	Cupped Steel Plastic Brush-Tip	Cupped Steel Plastic Brush-Tip	Cupped Steel Plastic Brush-Tip
Sizes	12'	14'	15'
Tube	Steel	Steel	Steel
