Innovative Options
For Application Versatility

The NutriMax® liquid fertilizer applicator helps ensure optimum crop performance through precise placement of nutrients where needed during periods of high plant growth. Now there are three application choices available to match the crop's life cycle and grower preferences.
Three nutrient application methods are now available for the NutriMax® liquid fertilizer applicator to best match the crop’s life cycle and individual grower preferences.

1. Standard Single Coulter system with 20” blade with a nozzle or knife injector mounted to a 1/2”-steel bar for consistent application into the center of the row.

2. Dual Delivery system features a single coulter with a 20-inch blade equipped with an injection nozzle or knife coupled with coulter-mounted drop hoses on each side of the coulter. This option allows the operator flexibility in injecting fertilizer in the row center, and/or next to the plant for faster uptake.

   The U-shaped steel coulter-mounting bracket positions the tubes outward for consistent application at the plant’s base for optimum nutrient uptake. Growers can apply nitrogen with the coulter injector only, drop hoses only, or both with a selector valve control for each row.

3. The Double Coulter option features two coulters per row with 20-inch blades for growers wanting to apply and incorporate liquid fertilizer closer to the root zone.

   The 10” off-center spacing places the fertilizer 33 percent closer to the root zone for faster plant uptake. Heavy-duty swivel coulters with six-bolt hubs are equipped with injection nozzles for precise application.

   - All of these application methods are attached with patented cast mounting brackets, keeping the coulters straight and on target for precise application. All coulters feature 1,500 lbs. of down pressure, six-bolt hubs with recessed caps and triple-lip bearings for long life and choice of rippled or smooth blades.

   - The NutriMax applicator features 36” of total toolbar clearance, ensuring the longest application window possible. Its rugged frame and unique toolbar design are built for high-speed application. Tank capacities of 2,600, 1,800 and 1,400 are available to fit your operation’s needs.

   - The NutriMax liquid fertilizer applicator’s unique folding designs provide a narrow transport width for easier and safer field-to-field travel.

Travel the extra mile, cover the extra acre with the NutriMax liquid fertilizer applicator! See your nearest Unverferth dealer today or visit unequip.com for complete details.
