

**UM****New!****Introducing****NEW STRIP-BUILDER ATTACHMENTS  
FOR UNVERFERTH RIPPER-STRIPPER TOOL**

New for 2026 is a complete lineup of strip-builder tillage attachments for the Unverferth Ripper-Stripper® tillage tool. This new lineup offers easier adjustability, additional tillage options and enhanced features to keep your operation rolling during the busy tillage season. Numerous blade styles, Rolling Harrow® baskets and firmers are available to match your tillage practices, and the re-designed 4-coulter option has been streamlined for easier installation and ease of use. All strip-builders are mounted directly to each shank to permit independent row-to-row floating for the most consistent strip-building across the entire machine.

**Features**

- 1 Strip-builders feature parallel-link mounting directly to each shank so each row floats independently across the entire machine for consistent tillage action.
- 2 Tool-free spring down pressure adjustment on the parallel mounting arms allows the operator to adjust the down pressure for the entire row unit.
- 3 All-new tool-free coulter angle adjustment with 7 locking positions allows the operator to adjust the aggressiveness of each coulter to match different soil types.
- 4 The coulters also feature quick and easy single-point width adjustment to make the strip wider or narrower depending on operator preference.
- 5 The trailing basket or rubber press wheel is length adjustable to move it away from the coulters for increased trash flow in high-residue applications, and to accommodate the 4-coulter option.
- 6 The trailing Rolling Harrow® basket attachment now features patented heavy-duty 4-bolt flanged bearings with triple-lip seals for high-acreage applications.
- 7 An all-new 4-coulter option is now available:
  - This produces greater tillage action for a more defined strip and creates a better seedbed.
  - The 4-coulter option can be easily added with 4 bolts on each side of the strip-builder.
  - Tool-free angle adjustment of each coulter with 7 locking positions and single-point width adjustment.

# STRIP-BUILDER OPTIONS

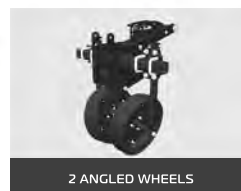

Unverferth offers the widest range of strip-builder attachments to work in a wide variety of soil conditions.

For a rough textured seedbed, choose the wavy coultter only strip-builder attachment. For increased soil conditioning, choose from a wide variety of wavy coultter blades paired with a 15" or 20" rear conditioning basket. For maximum tillage action and the ideal planting strip, choose the 4-coultter option with a variety of coultter and basket combinations.

For enhanced firming action in lighter soils, choose a strip-builder with trailing rubber press wheels. The 4-coultter option can be added to any combination of strip-builders with press wheels.

For seedbed firming in the lightest soils, choose from a variety of press wheel strip-builders to meet your operation's needs.
